

## Varicella Chicken Pox Vaccine

	Chicken Por	x vaccine	
Pathophysiology	Varicella Zoster Virus		
	Respiratory Incubation 1	transmission 4-16 days	
Vaccine Description	Live attenuated vaccine		
Dose & Route	0.5 mL reconstituted vaccine given subQ		
Administration Schedule	Dose	Recommended Age	
	1	12 months - 15 months	
	2	4-6 years*	
	*The 2nd dose can be administered at an earlier age		
	provided the interval between the 1st and 2nd dose is		
	at least 3 months. If the 2 <sup>nd</sup> dose is inadvertently		
	given at least 28 days after the 1 <sup>st</sup> dose, the 2 <sup>nd</sup> dose does not need to be repeated.		
Catch-up Vaccination	Varicella va	ccination is recommended for children who are	
_		5 months of age and do not have evidence of	
	immunity.		
Minimum Intervals	Minimum	Age at Dose 1 Minimum Interval to	
		Dose 2	
	12 mon	ths 3 mos. if Dose 1 given at	
1		<u></u> 8	
		<13 yrs. of age

Special Considerations & Instructions	<ul> <li>Vaccine is very fragile and must be stored frozen (+5°F or -15°C or lower).</li> <li>Reconstituted product must be used within 30 minutes.</li> <li>Pregnancy should be avoided for 1 month following varicella vaccination.</li> <li>Diluent may be stored at room temperature.</li> <li>For corticostenoid recipients: administration of varicella should be avoided for at least 1 month after cessation of high dose therapy.</li> <li>Treatment with low dose (-2mg/kg/day), alternate day, topical, replacement or aerosolized steroid preparations is <i>not a contraindication</i> to varicella vaccination.</li> <li>For chemotherapy recipients: administration of varicella should be avoided for at least 3 months after chemo cessation.</li> <li>Counsel varicella recipients: if a rash develops following vaccination, there is a possibility for these people to infect others but this is extremely rare.</li> <li>HIV infections with CD4 count ≥200 µL with no evidence of immunity: vaccination may be considered (2 doses administered 3 months apart); VAR contraindicated in HIV infection with CD4 count ≥200 µL</li> <li>Asymptomatic or mildly symptomatic HIV-infected children age ≥ 12 months with <i>age-specific CD4+ T lymphacyte counts</i> ≥ <i>15%</i>, and without evidence of varicella immunity should receive 2 doses of single antigen varicella vaccina 5 months apart.</li> </ul>
	<ul> <li>(2 doses administered 3 months apart); VAR contraindicated in HIV infection with CD4 count &lt; 200 cells /µL</li> <li>Asymptomatic or mildly symptomatic HIV-infected children age ≥ 12 months with <i>age-specific CD4+ T lymphocyte counts</i> ≥ 15% and without evidence of varicella immunity should receive 2 doses of single</li> </ul>
	<ul> <li>An automs in Google schools must prove documentation of vaciantation or immunity</li> <li>Varicella vaccine administration is recommended as post-exposure prophylaxis for susceptible persons if given within 3-5 days of exposure to varicella disease.</li> </ul>
